Plenum Adapters

Before considering plenum adapters for a furnace change over, several things should be considered:

1. Are the plenums in reasonably good condition, and are the connections to existing ducts satisfactory?
2. Is the replacement furnace several inches shorter than the existing furnace, or can enough of the existing plenums be cut off from the bottom to allow for the use of plenum adapters?
3. Are the plenum openings between the two furnaces fairly close in size?

If the answer to the above questions is yes, then your installation is a good candidate for plenum adapters. You will need to provide us with some measurements so that we can fabricate them. Below is a ready format to try and make measuring as easy, and complete, as possible.
